Subject: Human Advancement through Invention Grants in All Fields

January 14, 2009

I have been looking through your list of available grant categories and I find them to be lacking numerous fields of invention as far as the most beneficial direction that human endeavors could be working on. I see that President Elect Obama is contemplating 1 trillion dollars to be used primarily for job creation and stimulus to the economy. I feel that job creation must have the correct fields of endeavor or else the money will be essentially wasted or wasted at least in comparison to what could have been if my economic stimulus ideas were initiated. At the present time the economy appears to be essentially at a stand still due to the economic recession caused by the satisfaction of consumer demand in many areas, such as; housing, manufacturing, and necessity for commercial expansions. This may take some time for the population increase to recreate the demand necessary for renewed large scale activities in these and other affected fields in the economy. Also, I see that invention is at an extremely low state of private sector funding and R&D startups. This coupled with the outflow of reinvestment capital to foreign venues and the contraction of the overall available funds for reinvestment and the lack of demand for new consumer products is driving down the economy, emphasizing the need to restrict this money from leaving the country in the future. Citizenship abandonment by wealthy industrialist should not be the cause of allowing their funds to leave the U.S. investment community. So this is the perfect time for the U.S. Government to put into the pipeline research and development grants or loans for select marketable products and public works improvement projects. The creation of these listed new categories of grants and or loans that I have created below will help to ensure that incentives of our capitalistic system will continue to produce the most advanced capitalist country on the earth. The creation of these financial incentives for the work that needs to be done in order prepare teams to advance these projects to the stage of final completion through diligent review and proper project priority selections and project prioritization will move our society forward instead of its present state of stagnation. As a mostly under recognized inventor, this will be an excellent opportunity for myself and R&D teams to advance my marketable and valuable ideas. These changes in cooperation with my plan for patent reform will optimize human advancement through the recognition of financial rewards incentives necessary to drive our intellectual property system. Also, presently proposed retartive legislation must be changed drastically in order to return integrity to our system. These grants will make my company prosperous and progressive instead of my present state of having been in business for three years and having zero sales in that time period. This is also a horrendous waste of intellectual capacity. This lack of business activity has also caused a massive black hole in invention due to the loss of potential creativity. Hopefully through the adoption of these ideas, we can reduce this disgusting trend and move towards a new productive era in human advancement through invention.

We need to attract top new ideas through guarantees of compensation in order to maintain our leadership in world human advancement in innovation. We must eliminate the retartiveness of the theft of intellectual materials through improvements in identifying the correct individuals and rewarding their brilliant efforts. My new patent reform plan is being designed to accomplish these goals and more. Through the improvements in our patent grants research and the recognition of all beneficial ideas being patentable, we can create the most forward thinking country on the planet and lead the world onto global adoption of these principals in advancement. We must appropriate funding for these projects because the level of available private money funds has dried up due to the retraction of the country and world's economic activities. We need to attract the world's top inventors to our new progressive intellectual property grants program by offering financial incentives to them that have created all of the progress that the world has seen since the establishment of our patent system and the establishment of our constitutional right of ownership of individual's intellectual property creations conceived within their own individual creative minds. These grants should be established with 15% going to the invention conceiver and/or the balance to the developers with the help and compromise of all in congress and the president. These new goals for progression into the future can be quickly and easily realized and we can reverse the retartive direction that the current senator proposed legislation is leading the country and the world. Stolen ideas and old ideas are in abundance and are claimed and used by various individuals. New ideas are rare and valuable. The only way to genuinely stimulate the economy and create jobs is through genuine job creation through a natural cycle of creation of the new and the improvement of the existing.

The anti-inventor fraudulent big business dominated tendencies of the present senator proposed legislation needs to be thrown into the garbage as they promote the frauding of individual intellectual property rights in a broad variety of methods. Inventors like presidents should be respected for their greatness and rewarded through their patent granting as without them, human progress in the last 219 years would never have occurred and we would be primitive. The greatest inventors of all times should be recognized for their amazing actual ability to monopolize the creation of new inventions and original invention ideas. These individuals should receive a large place in history for their monumental achievements.

Our present patent system has no startup mechanism for created inventions to become reality especially in this present economic downturn. Seed capital suppliers want 50 to 60% interest making development impossible. Established companies won't buy the patents at all. They only want to steal them by claiming previous invention or wait until they become abandoned due to the lack of ability to obtain funding and receive them for free that way also. This is critical for the advancement of human activities that these projects provide and economic incentive for the inventor to produce the intellectual materials. Grants and contest can be repaid after the companies are well established thereby incurring no cost to the federal government as long as there is a mechanism in place to disseminate the good inventions from the bad inventions. I think that the presently evolving energy and economic stimulus plan will do nothing to advance the interest of the top potential plans, no money being allocated for the correct environmental economic stimulus.

The only way to genuinely stimulate the economy is through advancement of capitalism by granting patents and new business creation startup assistance. For 219 years, this has been the only genuine method.

The following is a list of needed new topics for improved human advancement. These new contests and grants should be brokered through the USPTO to hopefully ensure proper credits go the correct person.

- Legislation Designed Contests and Grants
- Marketable Inventions Consumer Beneficial Specially Selected High Quality Contests and Grants
- Crime Prevention, Detection, and Criminal Apprehension Contests and Grants
- Airline Security, Safety, and Congestion Contests and Grants
- Economic Stimulus and Job Creation Contests and Grants
- Electric Vehicle Mass Usage Feasibility Improvements Contests and Grants
- Foreign Oil Dependency Reduction Contests and Grants
- Green Plans Contests and Grants
- Patent Inventorship Redetermination Economic Stimulus Contests and Grants
- Space Exploration Directives Contests and Grants
- Air and Water Pollution Reduction and Cleanup Contests and Grants
- Power Plant Safety Improvements (Nuclear) Contests and Grants
- Vehicle Collision Death and Injury Reduction Contests and Grants
- Accidental Death Reduction Contests and Grants
- Patient Medical Treatment Direction Control Groups Contests and Grants
- Reorganize and Reprioritize the Federal Grant System eliminating Wasteful and Non-productive Contests and Grants
- Wildlife and Fisheries Restoration Ocean and Lake Contests and Grants
- Law Enforcement Education Design Contests and Grants
- High Speed Rail Design and Feasibility Studies Contests and Grants
- Jet Airliner and Small Aircraft Curtailment of Usage Contests and Grants
- Automobile Usage Curtailment Contests and Grants
- Land Development Conservation Contests and Grants
- Roads and Highway Traffic Congestion Reduction Contests and Grants
- Global Warming Solutions Contests and Grants
- Global Toxic Air Reduction Contests and Grants
- Energy Conservation Programs Contests and Grants
- Water Scarcity Solutions Contests and Grants
- Water Quality Improvement Solutions Contests and Grants
- Small and Large Business Survival Improvements Contests and Grants
- Economic Regulation Improvements Contests and Grants
- Recession Impact and Reduction Program Contests and Grants
- Patent Legislation Improvements Contests and Grants
- College Level R&D Contests and Grants
- Grant Determination Coordination Rule Improvements Contests and Grants
- Awarding Projects based on Viable Patents Pending or Patent Quality Analysis Contests and Grants
- Industrial Smoke Stack Scrubber Technology Contests and Grants
- Algae Oil Development Contests and Grants
- Un-invented Technologies (Future) Contests and Grants
- Contests Best Invention Awards and Developments Funding Contests and Grants
- Obvious Invention Awards Human Advancement Override Contests and Grants
- Rainfall Increase Inventions Contests and Grants

- Arctic Icecap Refreeze Contests and Grants
- Human Lifespan Longevity Improvement Contests and Grants
- Toxic Chemical Alternatives and Toxic Dumping Reduction Contests and Grants
- Real Estate Banking and Business Investment Regulation Design Contests and Grants
- Global, Thermal, and Nuclear, War Catastrophe Prevention Contests and Grants
- Global Catastrophic Solidified Projection of Non-Actions Scenarios regarding Environment and Population Contests and Grants
- Hydrogen Powered Automobiles Contests and Grants
- Nuclear Power Plant Design and Grid Contests and Grants

Please visit our website regarding the magnitude of the important crossroads that our country is currently at and explore the amazing history of the world's four greatest inventors.

Thank you for your time and attention to this extremely important matter.

Sincerely,
Michael R. Thomas
