To: Florida State Senator Mike Haridopolos, District 26

Greetings Mike,

I was watching the television last night with regards to the televised energy summit and I thought that it was very good to have this summit but I found that it was lacking something, mainly the mentioning of inventors and their critical role in conceiving all of the human advancements that we've seen in the last 207 years. It appears as though we're not encouraging innovation through the partnershiping of entrepreneurs and investors with the inventors. This of course destroys the incentive to produce new intellectual properties and causes title problems with the existing. For example, everything you discussed last night was originally conceived by me regarding renewable and traditional energy sources although I received no compensation. Clearly this trend needs to change in the future, however my company has seen no progress in the last three years. I have discussed in previous letters, a concept of establishing a state operated patentable idea investment board to selectively find the most viable invention investments for the state's interests in order to promote job growth and economic prosperity for the state. The key is in the ability of these individuals to separate the winners from the losers before committing public funds, all options and pitfalls must be considered including the selection of the correct development and business operating teams. Venture capitalist want excessive rates plus the ownership of the company and under these circumstances, the incentive to create is virtually destroyed. The other variable involves the patent office placing the patent in the correct name in order ensure continued inventor incentive to create. Presently we are in a near virtual state of economic stagnation due to the lack of cooperation with the master inventor. Therefore, most of the investments being considered will not bear fruit because they're either picked over or they have an unresolved title problems concerning conception. Clearly your energy summit needs to address these problems in order to make the state aware of where to find present and future business startup intellectual properties.

Sincerely,

Michael R. Thomas
