Attention: Oil Spill Containment Chief Manager
501 Westlake Park Boulevard
Houston
TX 77079

Subject: Oil Spill Gulf of Mexico

Attention Gentlemen:

We are observing on a daily basis that this oil spill is continuing to elude full containment despite considerable efforts on your part to accomplish this goal. You should become aware that all of the present containment methods that you have at your disposal and under construction were conceived by me over a period of years. I still haven't received any compensation for these inventions; however, I would like the oil spill contained due to the negative impact on the environment and its wildlife, tourism, recreational boating, and water related employment. While you feel that all is being done presently that can be done and that the spill is essentially impossible to control, the reality is that until I become involved in the project, there is a strong possibility that all that can be done is not being done. My company is presently in a depleted financial position due to the corporate attitudes of refusal to hire independent inventors. They won't recognize inventors as becoming potential business partners. They only want to hire an inventor as a low level employee subject to discharge after making the company millions or billions of dollars. Hopefully your company is not as greedy as this. We would propose to make improvements on the existing methods of oil slick control and reduce or eliminate the flow of oil emitting from this tragic well. For the sum of \$500,000, representing 500 hours of work at \$1000 an hour, you can hire me to formulate these new methods. This will include a full written report of what can be done to alleviate the problem. In order to accomplish this, I will need to

have a full photographic understanding of the situation as it exists. To accomplish this, I will need emailed video attachments in order to examine the situation hands on at the site of the tragedy. In the event that I am unable to produce any improvement on the existing, I am willing to return \$400,000 and you can hold a \$100,000 lien on my considerable holdings of intellectual property. In the event of successful improvement, I will hire additional staff to work on a patent or patents on the improvements. I would also like to receive 15% of the savings associated with reduced oil spill clean up costs from my improvements. The patents created would be owned by me and your company on an 85:15 basis, your portion 85% and my portion 15% after all expenses, and I would receive 15% after all expenses of any future oil well drilling project oil revenues that require the new improvements in order to lift governmental bands on offshore drilling associated with this tragedy. If only you would have been willing to consult with me before, the whole tragedy may have been averted as we are the world leader by far in the conception of major oil well related innovation and invention, having a family history of grandfathers conceiving oil related inventions dating back to 1805 with the invention of the world's first oil well and the invention of metal. Please visit my website for my family's full history of invention.

Sincerely,

Michael R. Thomas
